

Gate Guardian

Outback Property Solutions provides cost-effective practical solutions for the Central West of Queensland.

Gate Guardian is installed on critical gates and continually monitor when the gate is either opened or closed.

Gate Guardian alerts if a gate is open.

Wild dog exclusion fences protect sheep and cattle from the attacks of wild dogs. However wild dogs are able to breach the perimeter when a gate is left open.

Gate Guardian transmits data to the OPS web Portal using the OPS Communications Network.

Gate Guardian . . .

- continually monitors critical gates.
- records when each gate is opened or closed.
- records how long each gate is left open.
- alerts if a gate is opened (and it should be shut).
- shows all the information about the gate in a secure web Portal.

Stop wild dogs entering the exclusion fence areas
