

# Tank Monitor

**Outback Property Solutions provides cost-effective practical solutions for the Central West of Queensland.**

Tank Monitor continually monitors the water level within each tank and presents the data on the OPS web Portal.

Tank Monitor will alert if the water level falls outside a certain range and particularly if the tank is full or empty.

Tank Monitor uses non-contact sensors so there are no moving parts, nor anything to float on the water. Tank Monitor is a robust solution designed for the Outback.

Tank Monitor transmits data to the OPS web Portal using the OPS Communications Network.

## **Tank Monitor . . .**

- continually monitors the water level in the tank.
- shows tank level data over longer time periods.
- alerts if the water level falls outside specified bounds.
- shows the tank level data in a secure web Portal.
