

Turkey Nest Monitor

Outback Property Solutions provides cost-effective practical solutions for the Central West of Queensland.

Turkey Nest Monitor continually monitors the water level within each turkey nest and presents the data on the OPS web Portal.

Turkey Nest Monitor transmits data to the OPS web Portal using the OPS Communications Network.

Turkey Nest Monitor uses non-contact sensors so there are no moving parts, nor anything to float on the water. Turkey Nest Monitor is a robust solution designed for the Outback.

Turkey Nest Monitor will alert if the water level falls outside a certain range.

Turkey Nest Monitor . . .

- continually monitors the water level in the turkey nest.
- shows the turkey nest water level data over extended time periods.
- alerts if the water level falls outside specified bounds.
- shows the turkey nest level data in a secure web Portal.
